

# **Version 195**

## **What's new**

**Newly added features:**

*Added Rooms as group in Scenarios*

**New improvements on existing features:**

- Rest API cache improvements
- Improvement when adding Coolmaster units

## Added Rooms as group in Scenarios

In the Scenarios tab new feature is added when creating a dynamic or user triggered scenarios. When defining actions and selecting the group icon, there is a possibility to choose between a group or a room.

The screenshot displays the TOUCH WAND interface for configuring a scenario. It is divided into three numbered steps:

- Step 1: Name**  
A text input field contains "Bedroom Sunrise".
- Step 2: Condition**  
A dropdown menu is set to "ilche". Below it are icons for "Time", "Wall Controller", "Panic Button", "Sensors", "Lights", "Radiator", and "Alarm". The "Time" icon is selected. Below these icons, the text "is:" is followed by a "Hour" dropdown and a time input field set to "06:00". A "+ Add another" button is at the bottom.
- Step 3: Action**  
A dropdown menu is set to "ilche". A tooltip is open over the "group" icon, showing two options: "Group" (with a people icon) and "Room" (with a house icon). The "Room" option is highlighted with a green border. Below the tooltip are icons for "Lights", "Shutters", "blinds", "group", "Dimmers", "AC", "TV", "Notifications", "Activate Scenario", "Deactivate Scenario", "Radiator", "Alarm", and "Camera". The "group" icon is selected. Below the icons is a dropdown menu. A "+ Add another" button is at the bottom.

At the bottom right of the interface, there are "Cancel" and "Submit" buttons.

By clicking on the group icon and then selecting the room icon, all rooms will be visible in the filter below and a possibility to turn them on/off.
